

About Clic Profile

Aesthetical and easy to install, the **Clic standing seam roof** gives buildings a special, modern look, which adapts perfectly to both the contemporary architectural style and heritage buildings.

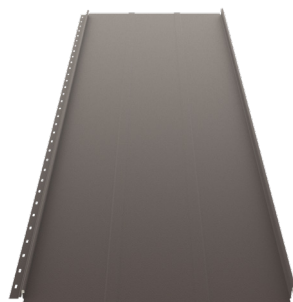

Joining the Clic metallic sheets is done by clipping, more precisely by pressing the upper sheet, over the lower one, in the joint area. Fixating the sheets is done by placing flat head screws in the specially placed perforations on the hidden edge of the profile, at distances of 300-350 mm.
